The Rice School of Architecture focuses on speculative practice - that is, the teaching and research of architecture and urban design as speculations that will advance professional practice as well as our built environment. Intimate student-faculty interaction, academic freedom, and unrestricted institutional cooperation within and outside the university are distinctive qualities of the architecture degree programs at Rice. Students build on their classroom experience through design-build projects in our Construct program; site and office visits with our Mentorship program; and our award-winning Totalization program, which incorporates professional consultants and instruction (structural, façade, financial, MEP, and other) within the studio, enabling our students to apply advanced technologies to building design and construction.

Rice Architecture's undergraduate programs maintain a balance between a focused study of architecture and a broad general education. In addition to formal coursework, students benefit from lectures and presentations from distinguished practitioners and scholars, symposia and other cultural events, and the unique Rice Preceptorship program, which places students in an outstanding professional office for a nine to twelve-month internship that includes all phases of the design-construction process.

Rice Architecture’s graduate programs contextualize design within a broader tableau of architectural history, contemporary practice, and advanced material and fabrication technologies. Rice’s graduate program culminates in an independent design thesis, on the principle that an architectural education provides a complete exposure to architecture’s breadth, from which the student establishes his or her depth, or expertise, through this independent research project.

The realization of such a large number of future projections over the preceding century allows us to examine their effects as they have now come to constitute our present. Focusing on modern urbanism, will trace both the historical and the contemporary effects of the future as it was imagined so long ago. Given the volatile historical moment that we are presently passing through, an effort will be made to understand the logic as well as the remaining potential of future projection as a design strategy today.
