BACHELOR OF SCIENCE IN CIVIL ENGINEERING (BSCE) DEGREE

The program leading to the BSCE degree is accredited by the Engineering Accreditation Commission (EAC) of ABET, https://www.abet.org.

Program Learning Outcomes (Student Outcomes) for the BSCE Degree

Upon completing the BSCE degree, students will be able to demonstrate:

1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
3. An ability to communicate effectively with a range of audiences.
4. An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
6. An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
7. An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.

Program Educational Objectives for the BSCE Degree

Within 3 to 5 years of graduation, graduates with a Bachelor of Science in Civil Engineering (BSCE) degree are expected to attain the following Program Educational Objectives (PEOs):

1. Demonstrate strong problem-solving and communication skills.
2. Achieve leadership positions in technical or managerial areas.
3. Demonstrate initiative and innovation in professional endeavors.
4. Demonstrate engagement in addressing ethical, social, environmental, and global concerns.
5. Remain engaged in continuing learning, including advanced degrees.
6. Obtain a Professional Engineering license, if appropriate.

Requirements for the BSCE Degree

For general university requirements, see Graduation Requirements (https://ga.rice.edu/undergraduate-students/academic-policies-procedures/graduation-requirements/). Students pursuing the BSCE degree must complete:

- A minimum of 35-36 courses (94-95 credit hours), depending on course selection, to satisfy major requirements.
- A minimum of 19 courses (54 credit hours) taken at the 300-level or above.
- The requirements for one area of specialization (see below for areas of specialization). When students declare the major (https://ga.rice.edu/undergraduate-students/academic-opportunities/majors-minors-certificates/#text) in Civil Engineering (associated with the BSCE degree), students must additionally identify and declare one of four areas of specialization, either in:
  - Area I - Environmental Engineering (p. ): Air and water quality, transport theory, modeling, and energy, or
  - Area II - Hydrology and Water Resources (p. ): Watershed and aquifer management, flood prediction, data analysis, GIS, and hydrologic modeling, or
  - Area III - Structural Engineering and Mechanics (p. ): Structural analysis, mechanics, design, dynamics, and matrix method, or
  - Area IV - Urban Infrastructure, Reliability, and Management (p. ): Transportation systems, complex urban systems, system reliability, soil mechanics, decision theory, engineering economics, and project management.
- A minimum of 16 courses (40-41 credit hours, depending on course selection) from the General Math and Science courses.
- A minimum of 9 courses (24 credit hours) from the Core Requirements.

Because of the common core requirements, it is possible for students to change their area of specialization at any time, even after initially declaring the major. To do so, please contact the Office of the Registrar (registrar@rice.edu).

Civil and Environmental Engineering’s innovative and challenging BSCE degree’s engineering curriculum is designed to provide significant flexibility to the student. Specific details and typical course layouts by semester can be found on the departmental website (http://ceve.rice.edu).

The courses listed below satisfy the requirements for this major. In certain instances, courses not on this official list may be substituted upon approval of the major's academic advisor, or where applicable, the department’s Director of Undergraduate Studies. (Course substitutions must be formally applied and entered into Degree Works by the major’s Official Certifier (https://registrar.rice.edu/facstaff/degeworks/officialcertifier/). Students and their academic advisors should identify and clearly document the courses to be taken.

Footnotes and Additional Information

1  Or an equivalent approved course
2  Students may substitute ESCL 115 with any departmental (ESCI) course offering.
3  Students may substitute STAT 310 with any departmental (STAT) course offering at the 300-level or above with the exception of STAT 305.
4  Please Note: For students pursuing an area of specialization in Environmental Engineering (Area I) or Hydrology and Water Resources (Area II), CEVE 401 is required, and CEVE 471 and CEVE 472 are Urban Infrastructure, Reliability, and Management (Area IV) electives. For students pursuing an area of specialization in Structural Engineering and Mechanics (Area III) or Urban Infrastructure, Reliability, and Management (Area IV), CEVE 471 and CEVE 472 are required and CEVE 401 is an Environmental Engineering (Area I) elective.
5  Courses that introduce fundamentals of civil and environmental engineering primarily targeted at students with diverse science, engineering, and humanities backgrounds (CEVE 101, CEVE 211, CEVE 310, CEVE 311, CEVE 312)
6  See also the University Graduation Requirements footnote above denoted with an *.

Areas of Specialization

To fulfill the remaining BSCE degree requirements, students must complete a total of 10 courses (30 credit hours) from the four areas of specialization as follows:

- 8 courses (24 credit hours), consisting of a minimum of 2 courses (6 credit hours) from each of the four areas of specialization as breadth.
- 2 additional courses (6 credit hours) from one of the four areas of specialization for a total of 4 courses (12 credit hours, including breadth) in that specific area as an area of specialization.

Area of Specialization: Area I - Environmental Engineering

All students must select a minimum of 2 courses (6 credit hours) from Area I. Students pursuing the Area I - Environmental Engineering area of specialization must complete:

- 4 courses (12 credit hours) from Area I - Environmental Engineering
- 2 courses (6 credit hours) from Area II - Hydrology and Water Resources
- 2 courses (6 credit hours) from Area III - Structural Engineering and Mechanics
- 2 courses (6 credit hours) from Area IV - Urban Infrastructure, Reliability and Management

Policies for the BSCE Degree

Transfer Credit

For Rice University’s policy regarding transfer credit, see Transfer Credit (https://ga.rice.edu/undergraduate-students/academic-policies-procedures/transfer-credit/). Some departments and programs have additional restrictions on transfer credit. The Office of Academic Advising maintains the university’s official list of transfer credit advisors on their website: https://oaa.rice.edu. Students are encouraged to meet with their academic program’s transfer credit advisor when considering transfer credit possibilities.

Departmental Transfer Credit Guidelines

Students pursuing the BSCE degree should be aware of the following departmental transfer credit guidelines:

- Requests for transfer credit will be considered by the program director (and/or the program’s official transfer credit advisor) on an individual case-by-case basis.

Additional Information

For additional information, please see the Civil and Environmental Engineering website: https://ceve.rice.edu.

Opportunities for the BSCE Degree

Academic Honors

The university recognizes academic excellence achieved over an undergraduate’s academic history at Rice. For information on university honors, please see Latin Honors (https://ga.rice.edu/undergraduate-students/honors-distinctions/university/) (summa cum laude, magna cum laude, and cum laude) and Distinction in Research and Creative Work (https://ga.rice.edu/undergraduate-students/honors-distinctions/university/). Some departments have department-specific Honors awards or designations.

Departmental Honor, Award, and Scholarship Opportunities

- Distinction in Research and Creative Work: The Department of Civil and Environmental Engineering will recognize graduating seniors for outstanding creative contributions with the award of Distinction in Research and Creative Work. The Department recognizes this award as being a significant honor. As such, it will be awarded to no more than 20% of a graduating class (rounded up to next whole number). This award shall be given for significant contributions in research, design, and creative projects beyond class assignments (except CEVE 499). Generally, it is expected that the student recipients will have performed research/design for a minimum of two academic segments (one segment = one academic year or one summer) during their undergraduate career (either for credit or pay). It may be given for one outstanding piece of work for consistent meaningful contributions made over the course of an undergraduate career. All majors (BA and BS) with a GPA of 3.30 or higher in all courses

Footnotes and Additional Information

¹ Offered alternative years
completed at Rice are eligible and will be considered for this
distinction in the spring prior to their graduation.

- **Rice Global Forum**: Rice Global Forum (RGF) is an engineering
and construction industry funded center which is in its second
decade of operation. It was founded by Ahmad Durrani, past chair
of Civil and Environmental Engineering at Rice. RGF funds and
facilitates interaction with the engineering and construction industry,
particularly oil and gas related work. RGF funds $25,000 worth of
scholarships every year. In addition, RGF also consistently sponsors
and supports Engineers Without Borders (EWB) and has donated
to other student clubs as well in addition to holding an engineering
design competition every year in February during National Engineers
Week.

**Fifth-Year Master’s Degree Option for Rice**

**Undergraduate Students**

Rice students have an option to pursue the Master of Civil and
Environmental Engineering (MCEE) degree by adding an additional
fifth year to their four undergraduate years of science and engineering
studies.

Advanced Rice undergraduate students in good academic standing may
apply to the MCEE degree program during their junior or senior year.
Upon acceptance, depending on course load, financial aid status, and
other variables, they may then start taking some required courses of the
master’s degree program. A plan of study will need to be approved by the
students’s undergraduate advisor and the (MCEE) chair of the department
graduate studies committee.

As part of this option and opportunity, Rice undergraduate students:

- must complete the requirements for their bachelor’s degree and the
  master’s degree independently of each other (i.e. no course may be
counted toward the fulfillment of both degrees).
- should be aware of the financial aid implications, if the conversion
  of undergraduate coursework to that of graduate level reduces their
  earned undergraduate credit for any semester below that of full-time
  status (12 credit hours).
- more information on this Undergraduate - Graduate Concurrent
  Enrollment possibility, including specific information on the
  registration process can be found here (https://ga.rice.edu/
  undergraduate-students/academic-opportunities/undergraduate-
  graduate-concurrent-enrollment/).

**Student Organizations and Clubs**

- **American Society of Civil Engineers Student (ASCE):** https://www.asce.org/membership/student/
  ASCE seeks to promote civil and environmental engineering, expose
  students to real world engineering, and connect students to alumni
  and professionals. Throughout the year we invite speakers from
  the industry, visit plants and sites, and organize social events. The
  objectives of this Chapter are to encourage the development of
  a professional consciousness, to afford an opportunity for civil
  engineering students to become acquainted and to practice working
together effectively, to promote a spirit of congeniality among them,
  and to provide friendly contact with the engineering profession. We
  also support the Concrete Canoe competition (see below) and the
  Seismic Design Competition of the Earthquake Engineering Research
  Institute (EERI).
- **Chi Epsilon:** https://www.chi-epsilon.org/xewebgeneral2/.

Chi Epsilon is dedicated to maintaining and promoting the status
civil engineering as an ideal profession. Chi Epsilon was
organized to recognize the characteristics of the individual civil
engineering deemed to be fundamental to the successful pursuit
of an engineering career, and to aid in the development of those
characteristics in the civil engineering student.

- **Engineers Without Borders (EWB):** https://ewb.rice.edu/
  EWB partners with developing communities worldwide to design
  engineering solutions that will improve their standards of living. It is
  an important component of the Civil and Environmental Engineering
  program. BA students with their flexible curriculum are encouraged
to participate. This exciting endeavor allows undergraduates to have
an experience in a developing country, where they are able to design
and build a project to help society. Students have been attracted to
the EWB program in large numbers and our local chapter is one of the
most successful in the United States. Some CEVE courses are EWB-
related, providing the opportunity to also obtain credit hours.

- **Concrete Canoe:** https://concretecanoe.rice.edu/
  Rice Concrete Canoe is a student-run club that creates a functional
  concrete canoe to race and present at the yearly ASCE sponsored
  competition. Through the year, members gain engineering experience
  through the research, planning and constructing of a concrete canoe.
  By offerings members exposure to the engineering design process,
  small-group work, software such as Matlab and Adobe Illustrator (and
  possibly more starting this year), and laser cutters, Concrete Canoe
  offers a unique experience to students regardless of whether or not
  they want to become engineers.

- **Society of Women Engineers:** https://swe.rice.edu
  The Society of Women Engineers aims to empower women to
  pursue and achieve their full potential in science and engineering
  related fields. We provide opportunities in professional development,
  academic and post-graduate planning, community outreach, and
  social events.

**Additional Information**

For additional information, please see the Civil and Environmental
Engineering website: https://ceve.rice.edu/
