DOCTOR OF PHILOSOPHY (PHD) DEGREE IN THE FIELD OF CIVIL ENGINEERING

Program Learning Outcomes for the PhD Degree in the field of Civil Engineering

Upon completing the PhD degree in the field of Civil Engineering, students will be able to:

1. Demonstrate a solid foundation in civil and environmental engineering at the graduate level.
2. Acquire advanced knowledge of the principles of civil and environmental engineering and apply them to advanced technical problems.
3. Conduct an independent research program.
4. Demonstrate professional written and oral communication skills.

Requirements for the PhD Degree in the field of Civil Engineering

For general university requirements, please see Doctoral Degrees (https://ga.rice.edu/graduate-students/academic-policies-procedures/regulations-procedures-doctoral-degrees/). For additional requirements, regulations, and procedures for all graduate programs, please see All Graduate Students (https://ga.rice.edu/graduate-students/academic-policies-procedures/regulations-procedures-all-degrees/). Students pursuing the PhD degree in the field of Civil Engineering must:

1. Complete 90 credit hours at the 500-level or above of approved courses past the BS degree (60 credit hours past the MS degree) with high standing (see guidelines at: https://ceve.rice.edu/).
2. Complete at least 6 core courses required by the department.
   - For students focusing on civil, structural engineering, and mechanics, coursework must include one course in each of the following areas: structural mechanics and FEM, structural dynamic systems, earthquake engineering, probabilistic mechanics, and applied mathematics. Comparable coursework completed previously may be substituted for these core courses. A minimum grade of B- (2.67 grade points) must be achieved for each of these core courses, as well as a minimum GPA of 3.00.
3. Spend at least four semesters in full-time study at Rice and successfully accomplish the following:
   - Pass a preliminary examination (https://ceve.rice.edu/graduate-program/msphd-program/preliminary-phd-exam/) in civil engineering (see guidelines at: https://ceve.rice.edu/).
   - Pass a qualifying examination on coursework, proposed research, and related topics.
   - Complete a thesis indicating an ability to conduct original and scholarly research.
   - Pass a formal public oral examination on the thesis and related topics.

Course requirements are stipulated to prepare and train students for rigorous and high quality education, research, and practice. These courses, usually completed within the first two years of graduate school, are designed to train and test the student’s aptitude for higher level thinking, problem solving, and independent research. Core courses also contribute breadth beyond minimum competency as civil and environmental engineers. The students are expected to strive for breadth and depth in core course selection, by working with their advisor and preliminary examination committee, and ensure that minimum core competency expectations are met.

Civil engineering graduate students will be scheduled to take their preliminary examination no later than after two semesters of coursework at Rice. If a student enters in the spring semester, he/she needs to take the exam in the following spring semester along with other students. A student who passes the written and oral parts of the preliminary exam becomes eligible for taking the qualifying exam.

The qualifying examination is administered by the doctoral committee after students develop a research proposal to demonstrate their preparation for the proposed research and identify any areas requiring additional coursework or study. As part of the advanced degree training, we also may require students to assist the faculty in undergraduate courses and laboratory instructions.

Degree Requirements

Core Requirements

Select 6 courses from the following:

- CEVE 500 ADVANCED MECHANICS OF MATERIALS 3
- CEVE 503 NONLINEAR FINITE ELEMENT ANALYSIS 3
- CEVE 519 ELASTICITY, PLASTICITY AND DAMAGE MECHANICS 3
- CEVE 524 TIME-DEPENDENT SYSTEM RELIABILITY METHODS AND APPLICATIONS 3
- CEVE 527 COMPUTATIONAL STRUCTURAL MECHANICS AND FEM 3
- CEVE 531 DESIGN AND BEHAVIOR OF CONCRETE BUILDINGS AND BUILDING ELEMENTS 3
- CEVE 541 DESIGN AND BEHAVIOR OF STRUCTURAL STEEL BUILDINGS AND BUILDING ELEMENTS 3
- CEVE 550 BRIDGE ENGINEERING AND EXTREME EVENTS 3
- CEVE 576 STRUCTURAL DYNAMIC SYSTEMS 3
- CEVE 578 EARTHQUAKE ENGINEERING 3
- CEVE 592 MODELING AND ANALYSIS OF NETWORKED SYSTEMS 3
- CEVE 596 SYSTEM IDENTIFICATION OF DYNAMIC SYSTEMS WITH MACHINE LEARNING 3
- CEVE 678 APPLIED STOCHASTIC MECHANICS 3
- CEVE 679 APPLIED MONTE CARLO ANALYSIS 3

Additional Coursework as Approved by the Department

Total Credit Hours 90
Footnotes and Additional Information

The following notes provide additional information:

1. Substitutions will be considered when a Core Requirement is not offered, or under special circumstances related to the professional goals of the student. Substitutions will be considered on a case-by-case basis, and will require approval by the faculty. Potential substitute courses include: CEVE 518, CEVE 520, CEVE 592.

Policies for the PhD Degree in the field of Civil Engineering

Department of Civil and Environmental Engineering Graduate Program Handbook

The General Announcements (GA) is the official Rice curriculum. As an additional resource for students, the department of Civil and Environmental Engineering publishes a graduate program handbook, which can be found here: https://gradhandbooks.rice.edu/2020_21/Civil_Environmental_Engineering_Graduate_Handbook.pdf

Admission

Applicants pursuing graduate education in structural engineering, structural mechanics, and geotechnical engineering should have a BS in Civil Engineering with a significant emphasis on structural engineering, but students with other undergraduate degrees may apply if they have adequate preparation in mathematics, mechanics, and structural analysis and design.

Applicants pursuing graduate education in environmental engineering or hydrology should have a BS or BA in related areas of science and engineering and preparation in mathematics, science, and engineering or related courses. A BS degree in engineering or a degree in natural science is preferred.

Successful applicants typically have at least a 3.00 (B) grade point average in undergraduate work and high Graduate Record Examination (GRE) scores. For general university requirements, see Graduate Degrees (https://ga.rice.edu/graduate-students/academic-opportunities/degrees/) and Admission to Graduate Study (https://ga.rice.edu/graduate-students/academic-policies-procedures/admission/).

Additional Information

For additional information, please see the Civil and Environmental Engineering website: https://ceve.rice.edu/

Opportunities for the PhD Degree in the field of Civil Engineering

Fellowships and Opportunities

- NASA Internships: multiple opportunities are available for undergraduate and graduate students for spring and fall semesters, as well as year-long appointments.
- NRC Research Associateship Program: the National Academies of Sciences, Engineering, and Medicine offer paid postdoctoral, senior, and graduate fellowships.
- NASA Fellowships and other opportunities: NASA offers several internships, fellowships, and scholarships for both undergraduate and graduate students.
- NSF Graduate Research Fellowship Program (NSF-GRFP): provides fellowships to individuals selected early in their graduate careers based on their demonstrated potential for significant achievements in science and engineering.
- National Science Foundation (NSF) Graduate Research Fellowship Program (NSF-GRFP): provides research and training opportunities for graduate students in science and engineering.
- National Defense Science and Engineering Graduate Fellowship (NDSEG): offers stipends to students pursuing doctoral degrees in fields of study that utilize high performance computing to solve complex problems in science and engineering.
- Department of Energy Computational Science Graduate Fellowship (DOE CSGF): offers stipends to students pursuing doctoral degrees in fields of study that utilize high performance computing to solve complex problems in science and engineering.
- Institute for Broadening Participation: The objective of this student chapter is to encourage, facilitate, and promote learning and interest among students in the field of earthquake engineering through interaction with professionals and experts and through interdisciplinary involvement.

Additional Information
