Philosophy is best described as the attempt to think clearly and deeply about the fundamental questions that arise for us as human beings. What is the nature of knowledge (epistemology)? How are we to distinguish between what really is and what only seems to be (metaphysics)? What is the right thing to do (ethics)? Is there any meaning to existence? To study the history of philosophy is to study the best, most enduring answers given to these questions in the past. Because every other field of study adopts some stance toward these questions, though often implicitly, philosophical issues arise in the natural and social sciences, history, linguistics, literature, art, and so on. Special courses in philosophy deal with each of these.

Characteristic of philosophy are commitments to the construction and evaluation of arguments, to expressing thoughts clearly and precisely, and to defending one’s ideas and evaluating the ideas of others. The study of philosophy thus provides resources for critical participation in all realms of human endeavor.

The graduate program trains students to teach and pursue research in the main areas of department concentration: ethics (especially bioethics) and social and political philosophy, core portions of analytic philosophy (especially philosophy of mind), history of philosophy, and continental philosophy.

Markets are everywhere today: if you want to find a job, if you want to buy some good, or if you want to sell some service, you will inevitably have to submit yourself to their norms. Yet, this omnipresence of markets raises fundamental ethical questions. Is it really good that we organize exchange and production largely through markets? How are societies and individuals impacted by centrally relying on them? Should we, much rather, prefer a planned economy? Or would such a planned economy unduly constrain people’s freedom? And, if we opt for markets, what are their moral limits? Should human organs or access to health-care be distributed via a market? Should access to health-care be governed by market principles? This seminar explores these questions through contemporary and historical readings, drawing on a broad set of ideas in order to tackle the philosophical, moral and existential challenges that markets pose.

Grade Mode: Standard Letter
Course Type: Seminar

Course Level: Undergraduate Upper-Level
Description: The history of 19th century European philosophy is often told exclusively as a history of male voices – as a story 'From Kant to Hegel', 'From Hegel to Marx' and so on. By contrast, the voices of women philosophers (such as Karoline von Günderrode, Bettina von Arnim or Clara Zetkin) are rarely remembered, and even less frequently taught. This course aims to change that. Reading a wide array of texts written by women intellectuals of the time, we will aim to understand their philosophical contributions to German Idealism (e.g. Günderrode and Arnim), Feminism (e.g. Zetkin and Hedwig Dohm) and classical Socialism (e.g. Rosa Luxemburg). We will also examine their relationship to, and, more importantly, their critique of the work of some of their male counterparts (such as Fichte, Schelling, Marx and Nietzsche). Finally, we will consider why these women's voices have been so frequently neglected – and why it is, from a contemporary philosophical standpoint, worthwhile to discover them again.
