Systems, Synthetic, and Physical Biology (SSPB) is a new discipline that draws upon principles from physics, chemistry, engineering, and mathematics and integrates experimental biochemical, cell biological, and molecular genetics approaches with computational design, simulation, and modeling to anticipate the properties of complex and multiscale biological systems.

As a unique graduate program, SSPB represents a cooperative effort by faculty in the Schools of Natural Sciences (<https://ga.rice.edu/programs-study/departments-programs/natural-sciences/>) and Engineering and Computing (<https://ga.rice.edu/programs-study/departments-programs/engineering/>) to provide training in this highly interdisciplinary field. This program is housed in the Rice Synthetic Biology Institute (RSBI) (<https://synbio.rice.edu>) and is overseen by the dean of graduate and postdoctoral studies.

The interdisciplinary nature of the SSPB program allows students to fulfill their graduate degree requirements by taking select classes from any of the participating departments and performing their thesis research under the supervision of any faculty associated with the program.

Systems, Synthetic, and Physical Biology does not currently offer an academic program at the undergraduate level.

Master's Program

- Master of Science (MS) Degree in the field of Systems, Synthetic, and Physical Biology*

Doctoral Program

- Doctor of Philosophy (PhD) Degree in the field of Systems, Synthetic, and Physical Biology (<https://ga.rice.edu/programs-study/departments-programs/interdisciplinary/systems-synthetic-physical-biology/systems-synthetic-physical-biology-phd/>)

* Although students are not normally admitted to a Master of Science (MS) degree program, graduate students may earn the MS as they work towards the PhD.
