The Department of Earth, Environmental, and Planetary Sciences offers students the opportunity to work with open-ended, complex, and highly interconnected problems, giving them the skills to become leaders and entrepreneurs in the real world, whether that is in academia, running a business, or working with and for societal issues. Field and laboratory opportunities abound. Many students also present their own research projects at national and international professional conferences.

Faculty members have joint research projects with scientists at over 100 institutions worldwide, giving an international scope to the department with research programs on all the continents, in all of the oceans, and on four planets. Their research interests span a wide range of topics and fall broadly under two principal research themes: Earth Structure and Dynamics, and Earth Systems Science. Many departmental research programs involve substantial field activities, both on land and at sea. Similarly, several course offerings include field trips to a variety of destinations and geologic settings.

All undergraduate majors in earth science take a five-course core sequence, typically in the sophomore and junior years, on earth processes, materials, observations, and history. Majors also take a course in geological field techniques and introductory courses in mathematics, chemistry, and in many cases, physics and biology.

The selection of upper-division courses and additional science courses depends on which degree, BA or BS, and, for the BS degree, which of five tracks are chosen by the student: geology, geochemistry, geophysics, environmental earth science, or a track designed by the student subject to the approval of the department undergraduate advisor. The program of study typically includes experience with analytical equipment, computer systems, and fieldwork.

The BS degree should be chosen by students planning a career or further study in earth science or a related field. The BA degree has fewer requirements and might be a good choice for students planning a career or further study to which earth science is incidental.
