Anthropology is a discipline that encompasses many subjects of study, all related to understanding human beings and their cultures. A student may organize a major in one or more of anthropology's principal fields or may combine a major in anthropology with one in another discipline. The goal of anthropology is to understand and interpret cultural and biological differences among human societies, both past and present.

The Department of Anthropology includes diverse offerings in all major subfields of the subject. In archaeology there are courses on the rise and decline of past civilizations and cultures, as well as practical courses that permit students to participate in excavations. In biological anthropology there are courses in human evolution, human nutrition, and on the practice of medicine in our own and other cultures. Cultural anthropology surveys the diversity of world cultures, and offers courses on particular culture areas and provides critical perspectives on the study of contemporary culture changes globally. Social anthropology courses focus upon the study of myth, ritual, and religion among traditional and complex societies and the idea of history as cultural myth.

We also offer courses that explore the relationships between language, culture, and modes of thought in a number of societies. For those interested in the history of anthropology and its current concerns, there are a number of courses offered, including the art of ethnography and the study of the historical, political, and literary roots of anthropological ideas.

These worldviews defined how you are supposed to interpret issues ranging from whether health care is a right to how we as a country should treat immigrants. How did we get here? Are the debates we are having the only ways to debate these issues, or do other countries have different kinds of political debates? In this class, we take a broader global view on four ethnographic and philosophical questions central to democracy that is being reconfigured by new forms of autocracy in different countries. These questions are: What does democratic representation involve? How does a nation become and stay democratic? What is a government's obligations to its citizens? And lastly, what are a citizen's obligations to their nation – what constitutes a model citizen? In this course, we are going to address all three questions from an ethnographic perspective, exploring the cultural assumptions that underlie different countries' answers to these questions. We will explore how and when culture matters, asking whether political debates in Chile can ever be same as those in Kazakhstan or in the United States. In addition, we will examine how people discuss politics in the United States to look at what is American about politics here, paying particular attention to the assumptions inherent in public accounts of democracy in media, polling, congressional hearings, and so on. ANTH 350 - BAD LANGUAGE AND SEMIOTIC CRIMES**Short Title:** BAD LANGUAGE**Department:** Anthropology**Grade Mode:** Standard Letter**Course Type:** Seminar**Distribution Group:** Distribution Group II**Credit Hours:** 3**Course Level:** Undergraduate Upper-Level

Description: How is it possible that certain strings of sounds, uttered in just the right social context, have the power to offend, hurt feelings, ruin careers, be considered crimes, and even spark wars? This course provides a broad introduction to the field of linguistic and legal anthropology, its key concepts, and its methods through an exploration of “bad language” and semiotic crimes. We investigate a range of speech types—curses, oaths, insults, gossip, argument, taboo words, obscenities, blasphemy, slang—and the essential roles they play in our lives. At the same time, we develop a cross-cultural perspective by comparing our own notions of what counts as bad language with ways of speaking that others cultural groups consider rude, vulgar, and even dangerous. We will also explore how different societies set standards for pronunciation, word choice, spelling, speaking and writing, how those standards are enforced, and how/why they sometimes get contested or resisted. Under this heading we consider such issues as plagiarism, libel, hate speech, intellectual property and, in general, the policing of language and signs.

Restrictions: Enrollment is limited to Undergraduate, Undergraduate Professional or Visiting Undergraduate level students.

Course Level: Undergraduate Upper-Level

Description: This course asks students to consider the human as a special kind of animal, and the roles of other animals in our human worlds: as companions, spirits, artistic muses, laborers, and as sources of food, clothing, shelter, and tools. We examine how human-animal relationships have changed over time, and consider human impacts upon animals and environments at multiple scales: from continental and island colonizations, to local extirpations and global extinctions. While our scope is both geographically and temporally broad, specific case studies will be highlighted from Africa, Eurasia, North America, and the Pacific islands. The unifying thread among these case studies is a focus on lines of evidence, with the goal of exposing students to the diverse methods of archaeology: how can archaeologists determine the impacts of humans upon animals and vice versa, and how well are their interpretations supported by their data? Finally, we consider how knowledge of the past can help shape our approaches to animals and their environments today, with respect for the planet that we all share. ANTH 368 - SOCIAL DESIGN STUDIO**Short Title:** SOCIAL DESIGN STUDIO**Department:** Anthropology**Grade Mode:** Standard Letter**Course Type:** Seminar**Credit Hours:** 3**Course Level:** Undergraduate Upper-Level

Description: This course offers an introduction to design anthropology in theory and practice. Design anthropology is a fast-developing interdisciplinary field that incorporates concepts, research methods and creative practices drawn from design and anthropology. Design anthropology draws upon anthropological insights into social relations and cultural forms in order to challenge expert-defined design practices with more collaborative and contextually sensitive processes of design co-creation. In the first half of this seminar, we will explore the history of social design and how anthropological culture theory and its insights into the interpretation of meaning (e.g., Geertz) have directly impacted practices of social design. We will also explore how design's concern with innovation and futurity has attracted interest from public anthropologists interested not only in analyzing the world as it stands but also changing it for the better. In the second half of the course, the seminar will incorporate studio exercises where students will work in teams to practice social design skills through public-engaged projects to identify problems that are susceptible to social design solutions. Graduate/Undergraduate Equivalency: ANTH 568. Recommended Prerequisite(s): There are no specific prerequisites for this course. However, introductory level familiarity with anthropological theory and practice will be helpful. Design skills will also be useful, although are not required since the seminar's focus will be on design ideation. We explore the way that colonial geographies imprint geographies of toxicity and the ways that capitalism and consumption produce and distribute toxicity. In relation to health, we explore the ways that the materiality and biology of toxic exposure are embodied in specific ways that undermine singular or universalizable concepts and measures of human and environmental health and require us to think about the health in relation to the specificities of race, class, gender, disability, and intimacy in particular places and times. In relation to sovereignty, we explore the ways that the promiscuous movement of toxicants provokes but also eludes regulations that hew to the ridged boundaries of law and territory and raise new questions of accountability and evidence. Drawing on critical methods of speculation, the course will address the following themes: the role of racism in social reproduction through the body from colonialism and slavery to contemporary genomics; humanism; the racialization of physical matter and space; and concluding with Afrofuturism. In addition to mobilizing the theories and concepts developed to bear witness to the particularity of Black womxn's lived experience, this class has us consider what Black feminism can teach us about how to reckon with building a more just and equitable world with science and technology against various oppressive forces. ANTH 430 - WHEN HUMAN RIGHTS FAIL: THE ANTHROPOLOGY OF HUMAN RIGHTS**Short Title:** WHEN HUMAN RIGHTS FAIL**Department:** Anthropology**Grade Mode:** Standard Letter**Course Type:** Seminar**Credit Hours:** 3**Restrictions:** Enrollment is limited to Undergraduate, Undergraduate Professional or Visiting Undergraduate level students.**Course Level:** Undergraduate Upper-Level

Description: Who has human rights and why do they have them? This is a question that has plagued lawyers, anthropologists, political scientists, governments, and philosophers both before and after the start of the modern human rights movement in the 1940s. These questions are still relevant today, as people around the world claim that their human rights have been violated. The general consensus is that human rights are important because they protect us against abuse and harm, but what might it mean to consider that human rights are not always good? How might we have to reconceptualize the use, utility, and possibility of human rights when they are used to reinforce inequality, persecute vulnerable populations, or support nativist rhetoric and policy? We will ultimately ask who is human enough to deserve human rights? We will do so through primary source documents, ethnographic scholarship, and a variety of media. Design anthropology is a fast-developing interdisciplinary field that incorporates concepts, research methods and creative practices drawn from design and anthropology. In the first half of this seminar, we will explore the history of social design and how anthropological culture theory and its insights into the interpretation of meaning (e.g., Geertz) have directly impacted practices of social design. We will also explore how design's concern with innovation and futurity has attracted interest from public anthropologists interested not only in analyzing the world as it stands but also changing it for the better. In the second half of the course, the seminar will incorporate studio exercises where students will work in teams to practice social design skills through public-engaged projects to identify problems that are susceptible to social design solutions. Graduate/Undergraduate Equivalency: ANTH 661. Recommended Prerequisite(s): There are no specific prerequisites for this course. From Du Boisian political economy of racism and Black feminist poetics and performance to contemporary discussions of decolonizing and abolitionist anthropology, this course addresses how Black anthropologists have created ethnographic approaches that not only redress disciplinary anti-Black racism, but also, most importantly, provide approaches studying the robustness of Black life. Description: This course asks students to consider the human as a special kind of animal, and the roles of other animals in our human worlds: as companions, spirits, artistic muses, laborers, and as sources of food, clothing, shelter, and tools. We examine how human-animal relationships have changed over time, and consider human impacts upon animals and environments at multiple scales: from continental and island colonizations, to local extirpations and global extinctions. While our scope is both geographically and temporally broad, specific case studies will be highlighted from Africa, Eurasia, North America, and the Pacific islands. The unifying thread among these case studies is a focus on lines of evidence, with the goal of exposing students to the diverse methods of archaeology: how can archaeologists determine the impacts of humans upon animals and vice versa, and how well are their interpretations supported by their data? Finally, we consider how knowledge of the past can help shape our approaches to animals and their environments today, with respect for the planet that we all share. ANTH 568 - SOCIAL DESIGN STUDIO**Short Title:** SOCIAL DESIGN STUDIO**Department:** Anthropology**Grade Mode:** Standard Letter**Course Type:** Seminar**Credit Hours:** 3**Restrictions:** Enrollment is limited to Graduate level students.**Course Level:** Graduate

Description: This course offers an introduction to design anthropology in theory and practice. Design anthropology is a fast-developing interdisciplinary field that incorporates concepts, research methods and creative practices drawn from design and anthropology. Design anthropology draws upon anthropological insights into social relations and cultural forms in order to challenge expert-defined design practices with more collaborative and contextually sensitive processes of design co-creation. In the first half of this seminar, we will explore the history of social design and how anthropological culture theory and its insights into the interpretation of meaning (e.g., Geertz) have directly impacted practices of social design. We will also explore how design's concern with innovation and futurity has attracted interest from public anthropologists interested not only in analyzing the world as it stands but also changing it for the better. In the second half of the course, the seminar will incorporate studio exercises where students will work in teams to practice social design skills through public-engaged projects to identify problems that are susceptible to social design solutions. Graduate/Undergraduate Equivalency: ANTH 368. Recommended Prerequisite(s): There are no specific prerequisites for this course. Description: Through ethnographic, scientific, and personal accounts of toxicity in a range of sites—from warzones to office buildings—this course explores toxicity as an analytic that helps us think critically about health and sovereignty. We explore the way that colonial geographies imprint geographies of toxicity and the ways that capitalism and consumption produce and distribute toxicity. In relation to health, we explore the ways that the materiality and biology of toxic exposure are embodied in specific ways that undermine singular or universalizable concepts and measures of human and environmental health and require us to think about the health in relation to the specificities of race, class, gender, disability, and intimacy in particular places and times. In relation to sovereignty, we explore the ways that the promiscuous movement of toxicants provokes but also eludes regulations that hew to the ridged boundaries of law and territory and raise new questions of accountability and evidence. In this class emphasis is placed on what the archaeological analyses of the material record reveal about slavery and the everyday lives of enslaved individuals, including plantation life, labor management of the planters, work habits of the enslaved, leisure time, economic networks, kinship, religious practices, retentions, and resistance, to name but a few. Drawing on critical methods of speculation, the course will address the following themes: the role of racism in social reproduction through the body from colonialism and slavery to contemporary genomics; humanism; the racialization of physical matter and space; and concluding with Afrofuturism. In addition to mobilizing the theories and concepts developed to bear witness to the particularity of Black womxn's lived experience, this class has us consider what Black feminism can teach us about how to reckon with building a more just and equitable world with science and technology against various oppressive forces. Description: Who has human rights and why do they have them? This is a question that has plagued lawyers, anthropologists, political scientists, governments, and philosophers both before and after the start of the modern human rights movement in the 1940s. These questions are still relevant today, as people around the world claim that their human rights have been violated. The general consensus is that human rights are important because they protect us against abuse and harm, but what might it mean to consider that human rights are not always good? How might we have to reconceptualize the use, utility, and possibility of human rights when they are used to reinforce inequality, persecute vulnerable populations, or support nativist rhetoric and policy? We will ultimately ask who is human enough to deserve human rights? We will do so through primary source documents, ethnographic scholarship, and a variety of media. Design anthropology is a fast-developing interdisciplinary field that incorporates concepts, research methods and creative practices drawn from design and anthropology. Design anthropology draws upon anthropological insights into social relations and cultural forms in order to challenge expert-defined design practices with more collaborative and contextually sensitive processes of design co-creation. In the first half of this seminar, we will explore the history of social design and how anthropological culture theory and its insights into the interpretation of meaning (e.g., Geertz) have directly impacted practices of social design. We will also explore how design's concern with innovation and futurity has attracted interest from public anthropologists interested not only in analyzing the world as it stands but also changing it for the better. In the second half of the course, the seminar will incorporate studio exercises where students will work in teams to practice social design skills through public-engaged projects to identify problems that are susceptible to social design solutions. Description: This course examines the role Black anthropologists have played in shaping the modern history of anthropological thought. By considering the role Black anthropologists have played as ethnographic knowledge producers, rather than simply ethnographic objects, this seminar considers not how race has shaped the study of culture. In addressing the discipline's legacy of anti-Blackness in the study of "cultural difference," this class considers how Black anthropologists have drawn on concepts and theories within Black Studies to reimagine and rewrite their own genealogy within the discipline. From Du Boisian political economy of racism and Black feminist poetics and performance to contemporary discussions of decolonizing and abolitionist anthropology, this course addresses how Black anthropologists have created ethnographic approaches that not only redress disciplinary anti-Black racism, but also, most importantly, provide approaches studying the robustness of Black life.
